ER 25	3500/20000	÷	25000	kW
ER 32	4000/25000	÷	32000	kW

The industrial burners ER series are designed especially for water tube boilers used in big civil installations and industrial processes with a remarkable thermal demand.

These burners allow to realise a modular and flexible combustion system adding a preparation fuel unit (regulation pressure group set, preheating/pumping oil station), a gas train, a control panel and a fan.

Preheated air can also be used as in the oil diathermic generators and other heat recovery systems.

The modulating regulation always allows to reach a wide modulation ratio and optimal fluid-dynamics conditions for a good combustion.

Fuel Supply

HYDRAULIC CIRCUIT

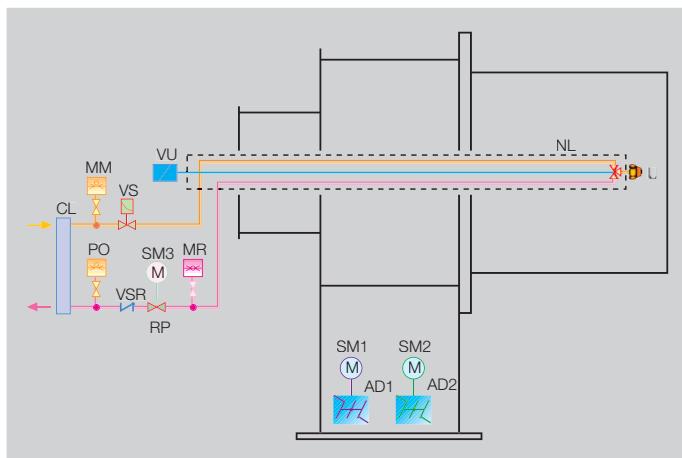

The hydraulic circuit of industrial burner ER series is composed by two main blocks; the first one, on bord, includes the emergency and regulation units; the second, separate to the burner, constitutes the pumping group.

A three servomotors system connects the regulation of the fuel and the air guaranteeing an elevate combustion efficiency on all firing rates.

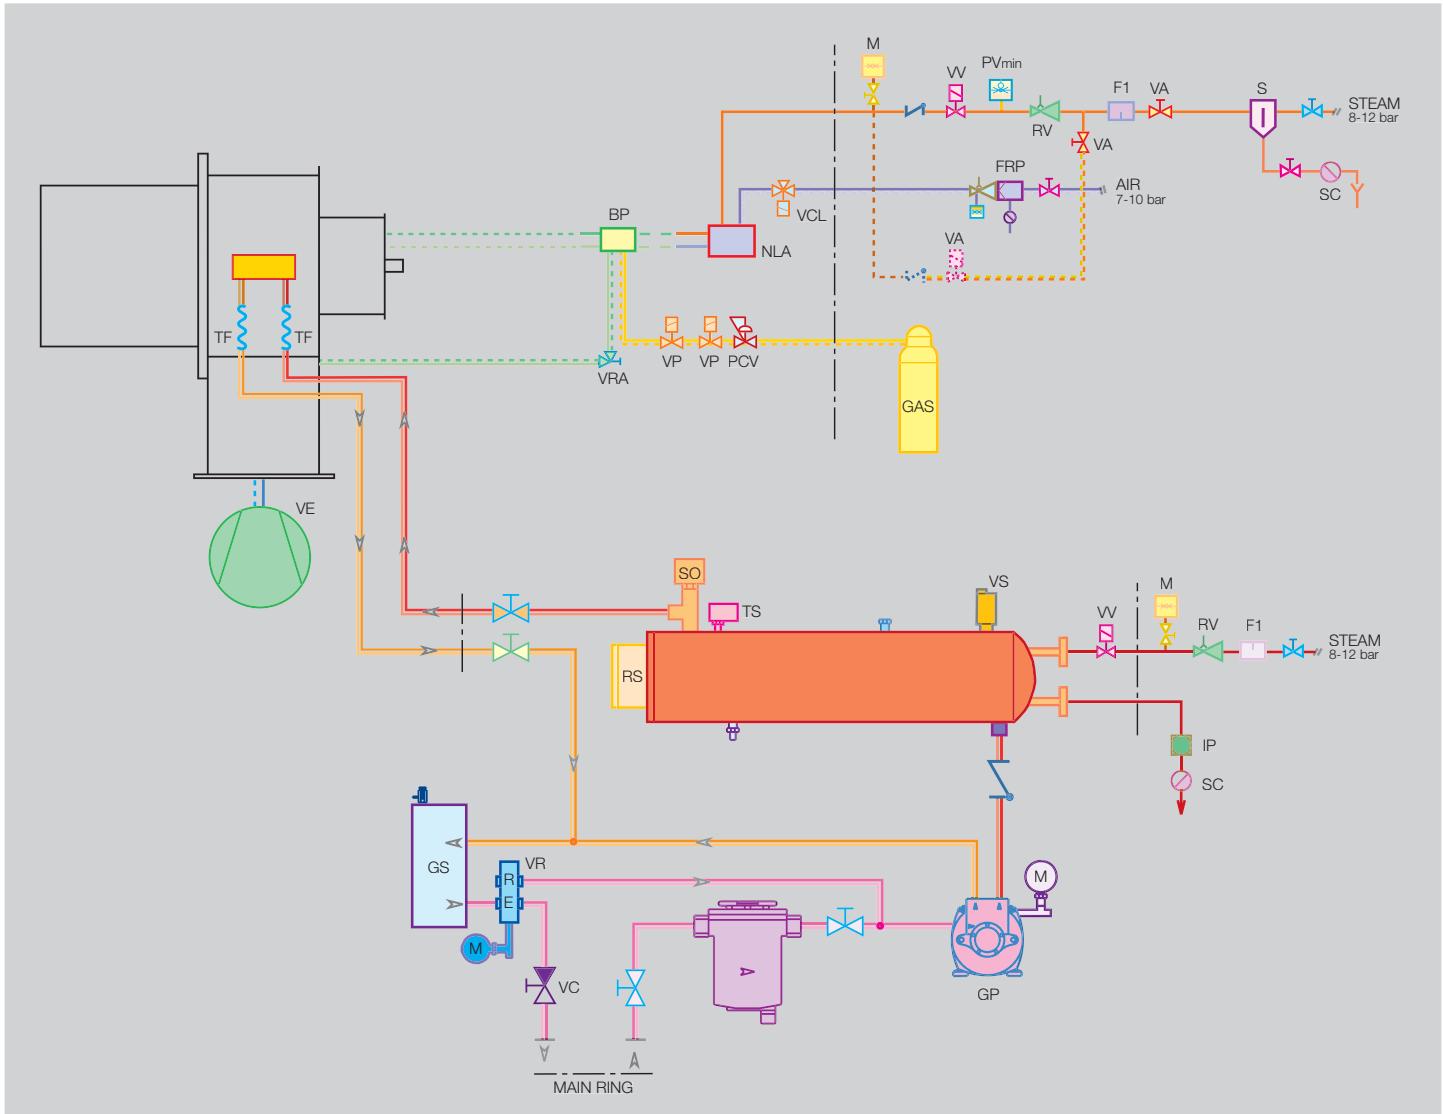

Example of oil and gas unit ER 9

ER 4 - 6 - 9 - 12 - 16 - 20 - 25 - 32 Mechanical Atomizing

AD1	First air damper
AD2	Second air damper
CL	Oil collector
MM	Pressure gauge on the delivery circuit
MR	Pressure gauge on the return circuit
NL	Oil pipe
U	Nozzle
PO	Max. oil pressure switch on the return circuit
RP	Pressure regulator on the return circuit
SM1	Air damper servomotor
SM2	Air damper servomotor
SM3	Servomotor of oil regulator
VS	Safety oil valve
VSR	Safety oil valve on the return circuit
VU	Nozzle safety valve

EXAMPLE OF COMPLETE SUPPLY OIL CIRCUIT

BP	Pilot burner
ELV	Electric/steam oil preheater
F	Self-cleaning filter
FRP	Air pressure regulation filter
F1	Filter
GP	Pump with pressure regulator
A : suction	
BP : by-pass	
S : delivery	
GS	Degassing unit
IP	Condensation passage indicator
PCV	Gas pressure regulator
PVmin	Minimum steam pressure switch
M	Pressure gauge
NLA	Oil lance
RS	Pre-heater heating element

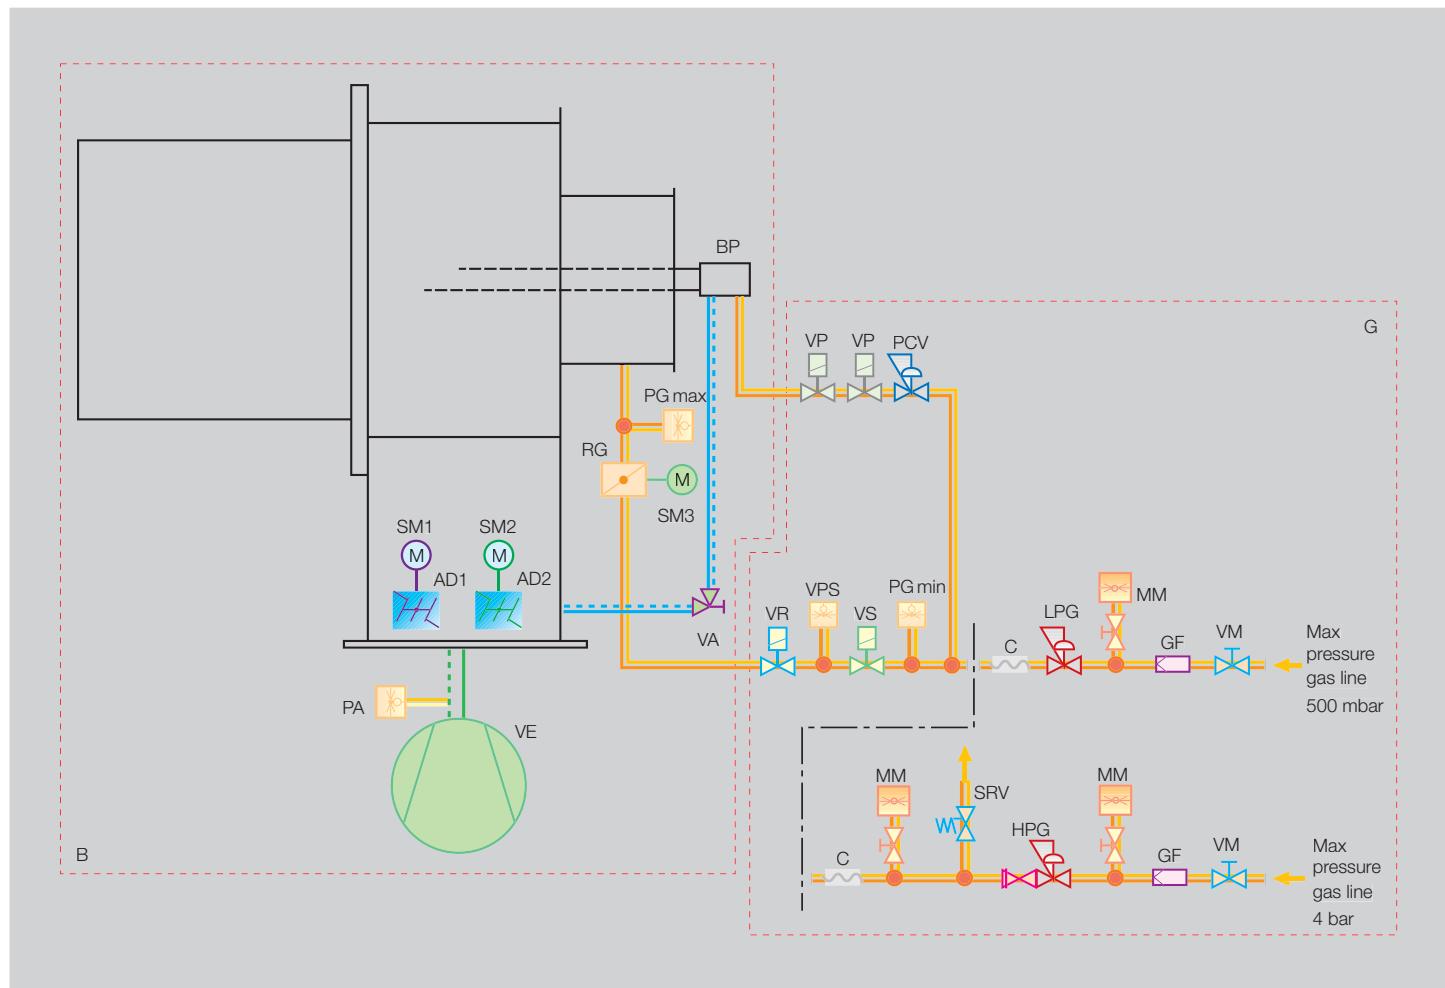

RV	Steam/air pressure regulator
S	Condensation separator
SC	Condensation outlet
SO	Oil temperature probe (PT 100)
TF	Flexible hose
TS	Maximum and minimum oil thermostat
VA	Air/steam adjustment valve (manual selection)
VCL	Oil lance hydraulic control valve
VRA	Air pressure regulation valve
VC	Relief valve (normally closed)
VE	Fan
VP	Pilot valve
VR	Oil pressure regulator valve
VS	Safety valve (maximum pressure)
VV	Steam solenoid valve

NOTE: With ring distribution oil systems, the feasible drawings and dimensioning are the responsibility of specialised engineering studios, who must check compatibility with the requirements and features of each single installation.

EXAMPLE OF COMPLETE SUPPLY GAS LINE

The ER burners series are fitted with a butterfly valve to regulate the fuel, controlled by the main management module, placed in the control panel, through a high precision servomotor.

The association of the air and fuel regulation, guarantees high thermal efficiency all over the firing rates.

B	Burner
G	Supply gas line
VE	Fan
PA	Minimum air pressure switch
AD1	First air damper
AD2	Second air damper
SM1	First air damper servomotor
SM2	Second air damper servomotor
SM3	Servomotor of gas regulator
PG max	Maximum gas pressure switch
RG	Butterfly valve
BP	Pilot burner
VA	Air pressure regulator valve

VP	Pilot valve
PCV	Pilot pressure regulator
VR	Gas train adjusting valve
VPS	Seal control
VS	Gas train safety valve
PG min	Minimum gas pressure switch
C	Anti-vibrant joint
LPG	Low pressure regulator
MM	Pressure gauge
GF	Filter
VM	Manual valve
SRV	Vent safety valve
HPG	High pressure regulator

Air Suction Circuit

The air suction circuit of ER burners is designed with two independent air ducts, each of them equipped with an independent high precision servomotor to control the air flow.

This particular design allows to obtain primary and secondary air flows to the combustion head in order to obtain staging combustion system (see "Combustion head" section).

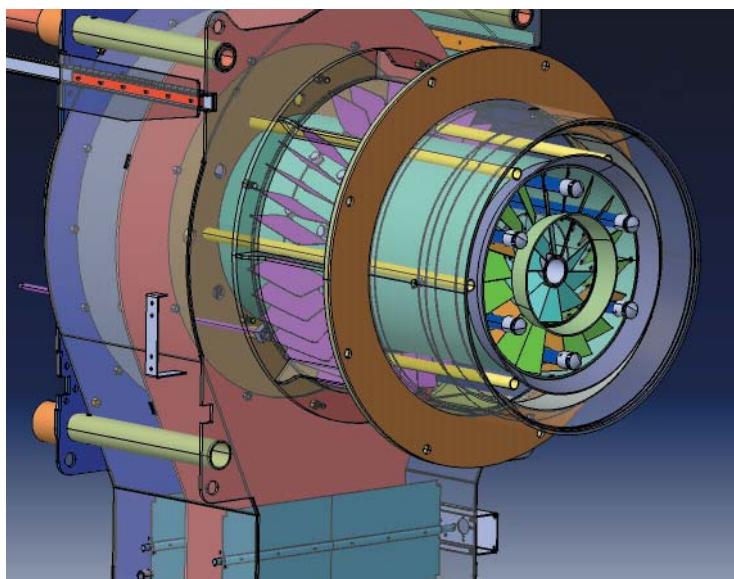

In the secondary air duct, moreover, is placed an axial swirl that permits, associated to the different distribution of air flows, to adjust the flame shape.

Example of axial swirl register device

Example of air dampers

Example of air suction circuit

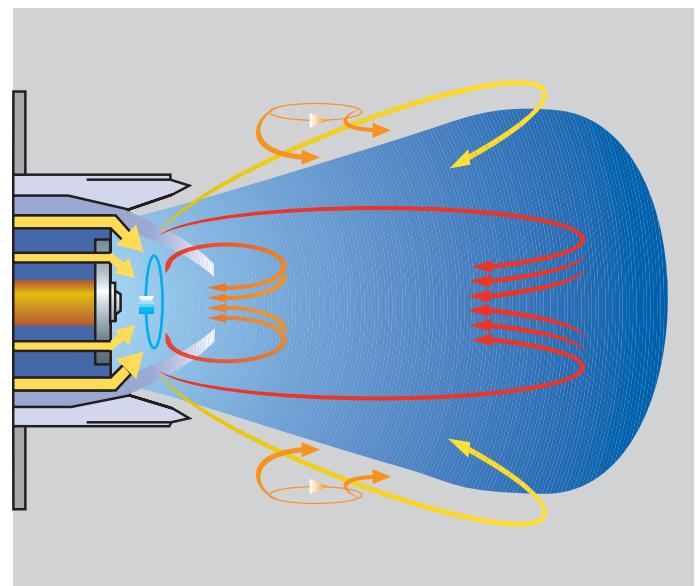

Combustion Head

The ER series burners reduce polluting emissions with their exclusive design based on a "three zones" combustion system. In the first zone combustion is developed in air defect and consequently the flame is maintained at low temperature, controlling thermal NOx formation.

In the second zone, that it is developed thanks to the flow and the spin of the secondary air, the completion of the combustion happens. The third zone of combustion is constituted from the recirculation of combustion gases and reduces the oxygen content in the external part of the flame, limiting the formation of thermal NOx.

Example of ER 9 combustion head

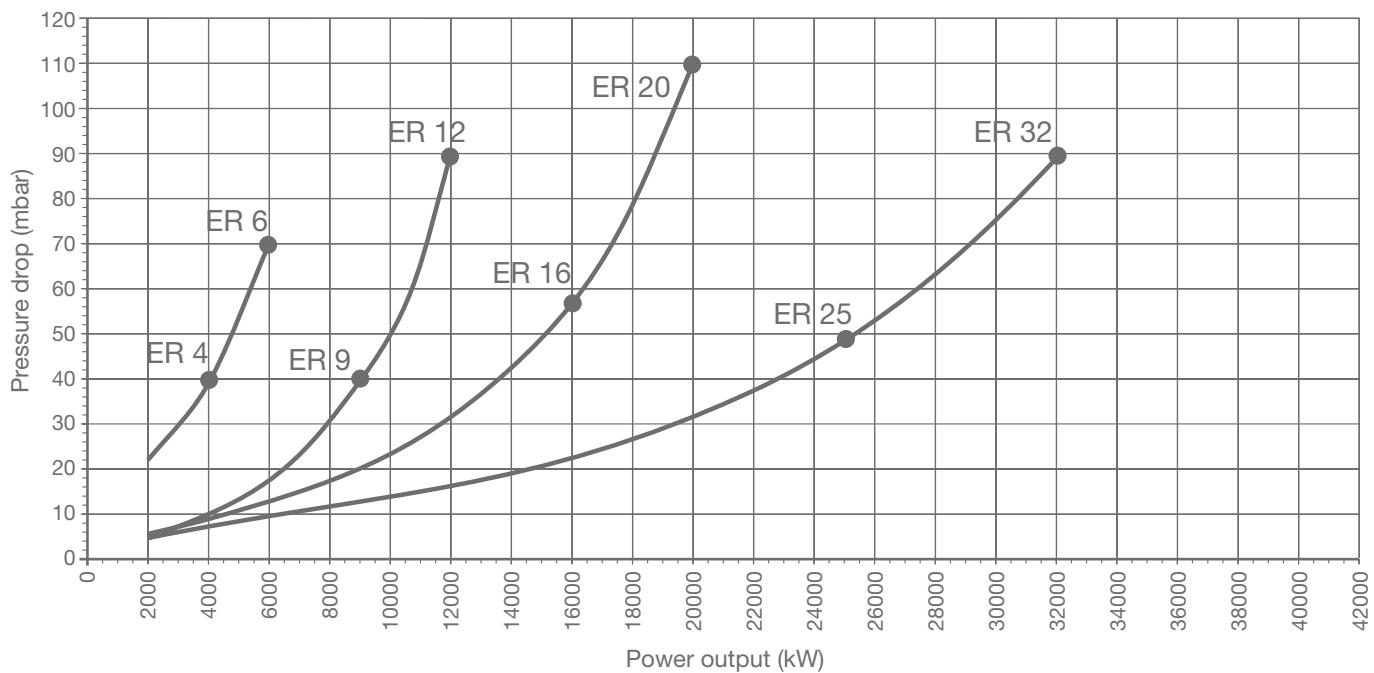

ER combustion head operating diagram

CHARACTERISTICS COMBUSTION HEAD CURVES

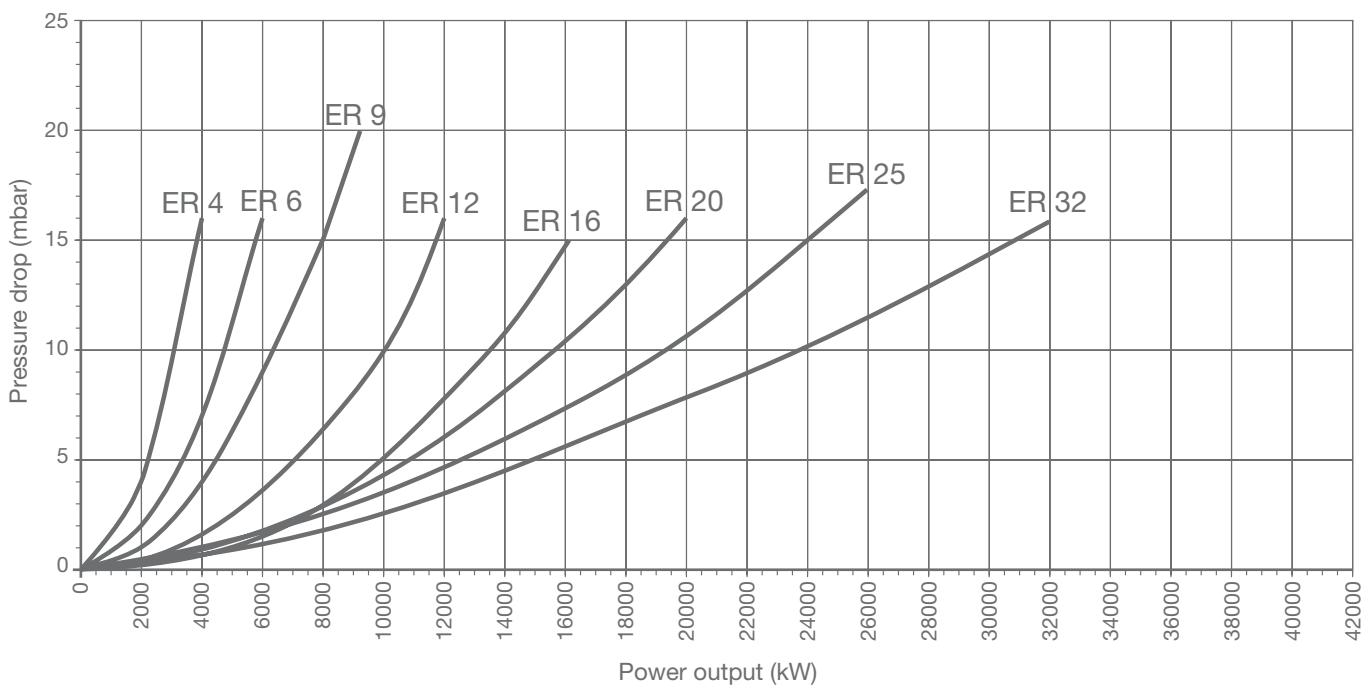

GAS PRESSURE LOSSES

The following diagrams indicate the gas side losses of the combustion head and the regulator butterfly valve. Adding to the value of these losses the combustion chamber pressure and total gas train loss, it is obtained the minimal input pressure necessary to the gas train.

Burner head GAS pressure drop (including butterfly valve and ref to G20)

Burner head AIR pressure drop (including air damper - AIR temp = 40°C)

Operation

BURNER OPERATION MODE

Each ER burner has a fuel flow servomotor (with a delivery regulator) and two air flow servomotors (with air dampers) that allows a high precision regulation, due to the absence of mechanical clearance normally found in mechanical regulation cams on traditional modulating burners.

On modulating operation the burner can run for a long time on intermediate output settings (see picture A).

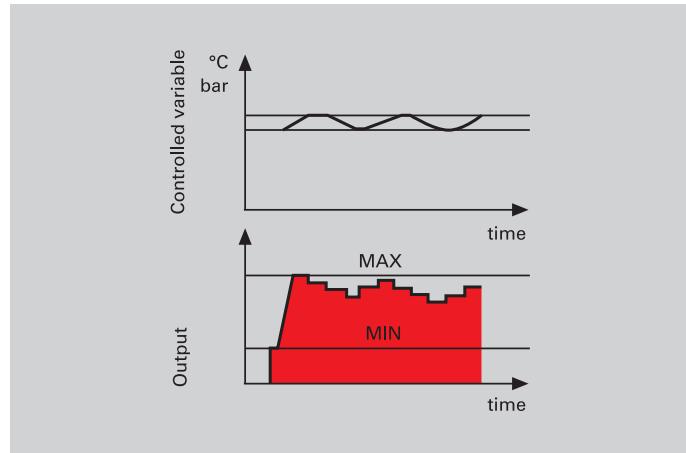

The control panels connected to the burners of ER series has a main electronic microprocessor management panel, that controls fuel and air flow servomotors to obtain the modulating operation of burner and to control boiler temperature or pressure by specific accessory probes.

The main electronic management panel shows all operational parameters in real time, so as to keep a constant check on the burner:

- servomotor angle
- required set-point and actual set-point
- fuel consumption (measured indirectly)
- smoke and environmental temperature (with EGA module accessory)
- CO₂, CO, O₂, NO e SO₂ value (with EGA module accessory)
- burner stage.

The main electronic management panel operations can be increased by installing accessory modules.

"MODULATING" OPERATION

PRODUCT SPECIFICATION

OIL BURNER

Combustion head:

Forced draught oil burner with modulating operation and separate supplies, fully automatic, made up of:

- Sheet-steel airlock painted with a front cover for access to the internal elements
- Air dampers for air setting controlled by two independent high precision servomotors
- Combustion head fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - pilot burner with gas train and ignition electrodes
 - flame stability disk made up of axial swirlers
- Flame shape regulation device
- Photocell for flame detection
- Minimum air pressure switch
- Nozzle pipe
- Safety nozzle valve
- Valves group with safety oil valves
- Automatic regulator of oil delivery controlled by a high precision servomotor
- Maximum oil pressure switch on the return circuit
- Pressure gauge on the delivery circuit
- Pressure gauge on the return circuit
- Electrical box with ignition transformer
- IP 54 electric protection level.

Conforming to:

- 89/336 (2004/108) EC directive (electromagnetic compatibility)
- 73/23 (2006/95) EC directive (low voltage)
- 98/37/EC directive (machinery)
- EN 267 (liquid fuel burners).

Standard equipment:

- Screws for fixing the burner flange to the boiler
- Thermal screen
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue.

GAS BURNER

Combustion Head:

Forced draught gas burner with modulating operation and separate supplies, fully automatic, made up of:

- Sheet-steel airlock painted with a front cover for access to the internal elements
- Air dampers for air setting controlled by two independent high precision servomotors
- Combustion head fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - gas distributor with multiple pipes
 - pilot burner with gas train and ignition electrodes
 - uv photocell
 - flame stability disk made up of axial swirlers
- Flame shape regulation device
- Minimum air pressure switch
- Maximum gas pressure switch
- Automatic regulator for gas delivery, controlled by a high precision servomotor
- Gas pressure test point to the combustion head
- Electrical box with ignition transformer
- IP 54 electric protection level.

Conforming to:

- 89/336 (2004/108) EC directive (electromagnetic compatibility)

- 73/23 (2006/95) EC directive (low voltage)
- 90/396/EC directive (gas)
- EN 676 (gas burners).

Standard equipment:

- Screws for fixing the burner flange to the boiler
- Thermal screen
- Screws for fixing the gas train flange to the burner
- Gas train gasket
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue.

DUAL FUEL BURNER (OIL/GAS)**Combustion Head:**

Forced draught dual fuel burner with modulating operation and separate supplies, fully automatic, made up of:

- Sheet-steel airlock painted with a front cover for access to the internal elements
- Air dampers for air setting controlled by two independent high precision servomotors
- Combustion head fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - gas distributor with multiple pipes
 - pilot burner with gas train and ignition electrodes
 - flame stability disk made up of axial swirler
- Flame shape regulation device
- UV photocell for flame detection
- Nozzle pipe
- Safety nozzle valve
- Valves group with safety oil valves
- Automatic regulator of oil and gas delivery controlled by a high precision servomotor
- Maximum oil pressure switch on the return circuit
- Pressure gauge on the delivery circuit
- Pressure gauge on the return circuit
- Minimum air pressure switch
- Maximum gas pressure switch
- Gas pressure test point to the combustion head
- Electrical box with ignition transformer
- IP 54 electric protection level.

Conforming to:

- 89/336 (2004/108) EC directive (electromagnetic compatibility)
- 73/23 (2006/95) EC directive (low voltage)
- 98/37/EC directive (machinery)
- 90/396/EC directive (gas)
- EN 267 (liquid fuel burners)
- EN 676 (gas burners)

Standard equipment:

- Screws for fixing the burner flange to the boiler
- Thermal screen
- Screws for fixing the gas train flange to the burner
- Gas train gasket
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue.
